About me

- Hello! I'm a web developer with substantial knowledge in front-end technologies and a passion to learn more. Interested in computer tech since childhood - recently I had an amazing opportunity to acquire web programming as a hobby, yet seeking new opportunities to take me further into backend, mobile and AR/VR technologies as well.
- Learning, teamwork and practical experience are my priorities at the moment. I am a fast and passionate learner, my versatile experience helps me to ramp up in new areas and domains within days. Currently I am looking for a supportive team with high ambition and healthy learning culture.

Professional History

React Developer *with Freelance job(inquire for reference)*

october 2022 - june 2023

Responsibilities:

- My task was to create a working prototype of an app for an oncology clinic that would track history of the patients' symptoms, diagnoses and side-effects during the treatment
- Make a graphic representation of the patient body and locations of the problems that are tracked in the duration of the treatment
- Develop both front- and back- ends of the app

Achievements:

- Together with the client we have tracked the development process and were updating the requirements as new arose, or removing unnecessary ones if such were identified
- The app was developed in accordance with the client goals and on time
- The stack used: ReactJS, NodeJS, ExpressJS, TailwindCSS, SyncfusionUI, D3.js, Framer Motion, SQLite

Client Support Agent *with Capital.com, Belarus*

june 2021 - august 2022

Responsibilities:

- Answering questions regarding the platform, it's functionality, trading, and finance in general using the language of the inquirer
- Dealing with disgruntled clients in the way that leaves them satisfied, explaining their mistakes without hinting that they are the ones who is responsible for their losses
- Ensuring that company's strict KYC policies as well as GDPR, FATCA and FATF laws are followed

Achievements:

- Made sure that thousands of my clients understand the world of investing better that they did before making their inquiry
- Relayed relevant questions to compliance, client retention, finance or other departments
- Solved dozens of unusual situations and close calls that might have cost clients or company real financial losses

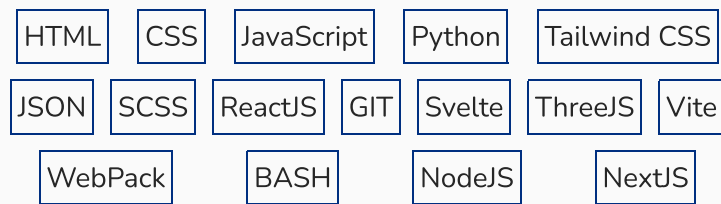

Various oilfield and logistics related roles *with Texas, USA*

september 2013 - january 2020

Responsibilities:

- On-site safety inspector with 1845 Oilfield Service
- On & off-site proppant delivery dispatcher with Stevens Tanker Division
- Long haul driver & driver trainer with Stevens Transport

Skills

Education

University: Moldova State University

In: Chisinau, Moldova

Faculty: Biology and soil science faculty, 2007

Major: Biotechnology specialization

Relevant Experience & Courses

Frontend Career Bootcamp *with Scrimba.com*

january 2021 - january 2022

- A self-paced course with own REPL system that explains minute details of tech that I've learned previously
- It allowed me to expand my skill in HTML, CSS, JS, explained frameworks such as Bootstrap, Tailwind CSS, preprocessors such as PostCSS and SCSS, JS library React and much more
- A reminder app was made with React and Tailwind as a part of this course

JavaScript 2020 *with Jonas Schmedtmann (Udemy)*

march 2021 - september 2021

- A comprehensive JavaScript course from Udemy that gives complete knowledge necessary to develop web applications with JavaScript
- I have learned the fundamentals of the language such as variables, loops, functions, data types, as well as the more complex things like OOP with JS, call stack, heap, garbage collection in JS, asynchronous JS
- Along the way I've developed a few applications such as mock banking app, exercise map and more

HTML, CSS, JavaScript interactive course *with HTMLAcademy.ru*

march 2020 - august 2020

- This course is an interactive and visual way to learn HTML, CSS, with some JS and PHP
- It allowed me to have a strong understanding of webpage structure including parts like HTML semantics, CSS grid & flexbox
- As part of this course I have made a few static pages.

Projects

'Bankist'

Client-side banking application. Transfer money, request loans, close accounts.

'Forkify'

Recipe app that uses 3rd party API. Find recipes, change serving size, or add your own recipes

'Mapty'

A map app that allows you to track your running and cycling workouts
